

# 2007 Kentucky Hybrid Corn Performance Test

W.L. Pearce, R.W. Curd, and C.D. Lee, Plant and Soil Sciences

The objective of the Kentucky Hybrid Corn Performance Test is to provide performance estimates of hybrid seed corn sold in Kentucky. The test has been conducted in an unbiased manner according to accepted agronomic practices.

## Presentation of Data

Complete 2007 data is presented for the tests across all locations and the tests at each location. Two- and three-year averages for yield are included in each of the single location tables. Tables that include data over multiple years and/or multiple locations provide better indication of hybrid performance. The multiple location tables are listed on page 1. If individual location data is used it should be in combination with a multiple location average. These tables present better estimates of hybrid yield ability than data gathered at one location in one year.

Comparisons between yields and other characters of any two or more hybrids should be made only with data from one table at a time. Hybrids are grouped into Early, Medium, Late, White, and Ethanol tests based on relative maturity or trait characteristic. Hybrids that yield equally as high as the highest yielding hybrid, based on statistical evaluation, are indicated by an asterisk. See the hybrid comparisons and the experimental design and means comparisons text sections for more detail.

## Testing Procedure

### Selection of Hybrids

The hybrids chosen for testing are those most likely to be available for sale in 2008. Seed of each commercial hybrid (Table 2) was obtained from the sponsoring company. Each company defined the maturity of their hybrids and was given the opportunity to identify the proper tests for their hybrids.

### Location of Tests

The map on page 1 shows the test locations. The test sites were selected to represent different agroclimatic areas of Kentucky where corn is a major commodity.

### Cultural Practices

Corn seed was planted no-till into soybean stubble at all locations except Quicksand, where corn was planted no-till into wheat cover crop stubble. Fertilizer was applied as indicated by soil tests.

All test areas were treated with herbicide(s) and insecticide(s) and were supplemented by post-emergence herbicide when necessary. Force insecticide was applied in the row at planting to control corn rootworms. Cultural treatment for each location and notes about the growing season are provided.

## List of Tables

## Locations of the 2007 Hybrid Corn Performance Test

Web site: <http://www.uky.edu/Ag/GrainCrops/varietytesting.htm>

## Experimental Design and Mean Comparisons

Each hybrid was grown in three replications at each location to sample uncontrollable variability within the field. Annual mean yields presented in the tables are averages of three replications at the test site; 2-year and 3-year means are averages of six and nine replications, respectively. A randomized complete block (RCB) design was used for each maturity group test at each location.

These tests are designed to predict yield ability. Slight differences in yield ability can occur as a result of variability in the field. The least significant difference (LSD) is used to account for that variability and to help determine significant differences between hybrid performances.

Consider the following example:

Hybrid .....	Yield (bu/acre)
A .....	165
B .....	155
C .....	140
LSD (0.10) .....	12

The yield difference between Hybrid A and Hybrid B is 10 bu/acre ( $165 - 155 = 10$ ). The difference is less than the LSD (12 bu/acre). Based on the LSD, the yield difference between hybrids A and B is not significant. Hybrids A and B have the same yield in this test. However, the yield difference between hybrids A and C is 25 bu/acre ( $165 - 140 = 25$ ), which is greater than the LSD (12 bu/acre). Based on the LSD, Hybrid A yielded more than Hybrid C in this test.

The LSD occurs at the bottom of each table. Yields that are less than the LSD are not significantly different from each other. The notation "N.S." in the tables indicates that no statistically significant differences were determined. An asterisk has been placed alongside yields that are not significantly different from the highest yield mean in that column. In addition, the tables are sorted from greatest yield to least yield.

The C.V. is a calculated value that helps indicate unexplained variation. A smaller C.V. indicates less unexplained variation and more precise results.

## Planting

All plots were planted with a John Deere Maxi-Emerge vacuum, two-row, no-till planter modified for small plot work. Modified planting cones replaced the planter boxes and allowed placement of a specified number of kernels per plot. Hybrid seed was planted into plots consisting of two rows 30 inches apart and 22 feet long. Hybrid seed was planted at 40 seeds per row for each plot. When seedlings were 12 to 18 inches tall, the stands were thinned to 35 plants per row equaling 28,000 plants per acre.

## Harvesting

All plots were harvested with a Massey Ferguson MF 8-XP two-row corn combine. Both rows of each two-row plot were harvested. The grain weight, moisture content, and test weight of corn from each plot was measured with an electronic scale and moisture meter mounted on the combine. Yields were calculated for grain at 56 pounds per bushel and adjusted to 15.5 percent moisture. The test weight reported in each annual table for any hybrid is not corrected for harvest moisture and is reported at the moisture content for that hybrid listed in that table. Dropped ears were not gleaned from the plots.

The total number of lodged plants was recorded at harvest. Also at harvest, selected plots were observed to indicate apparent European corn borer damage by counting the number of broken tops per plot, according to a protocol by Dr. Rick Bessin, Department of Entomology, University of Kentucky. Corn borer damage was minor at all locations. In general, Bt hybrids had less apparent corn borer damage than non-Bt hybrids.

## Hybrid Comparisons

The Kentucky Hybrid Corn Performance Test is divided into five tests: Early, Medium, and Late maturities, and White and Ethanol hybrids. These divisions provide evaluations of the hybrid groups without competition biases. The divisions do not allow for comparisons across groups. For example, a hybrid in the Early test cannot be compared to a hybrid in the Late or Ethanol test. The Early, Medium, Late, and White tests were grown at all seven locations for a total of 28 tests. The Ethanol tests were grown at four locations.

- The Early maturity hybrid group in Table 4E and all subsequent "E" tables includes those hybrids rated by the parent seed company to mature in 112 days or earlier.
- The Medium maturity hybrid group in Table 4M and all subsequent "M" tables includes those hybrids rated by the parent seed company to mature in 113-117 days.
- The Late maturity hybrid group in Table 4L and all subsequent "L" tables includes those hybrids rated by the parent seed company to mature in 118 days or later.
- The White hybrid group in Table 4W and all subsequent "W" tables includes those hybrids with a white seed coat that are rated by the parent seed company to mature in 112 to 118 days.
- The Ethanol group in Table 15 includes those hybrids higher in extractable starch content.

Open-pedigree hybrids of known maturity were included in each Early, Medium, and Late test to provide an internal evaluation of hybrid maturity. The seed of these hybrids was obtained from Illinois Foundation Seeds, Inc., at Champaign, Illinois.

Grain moisture of hybrids in the Early, Medium, and Late tests should be within the LSD of the check hybrid grain moisture for that test. Hybrids with grain moisture above the LSD of the check hybrid likely belong in a later-maturing test. Each hybrid is placed in the Early, Medium, or Late tests based on the hybrid maturity defined by the company.

Notes about the 2007 growing season are next to each locations data tables.

### **Chemical Analysis of the Early, Medium, Late, White, and Ethanol Tests**

Grain chemical composition was measured from one replication of each Early, Medium, Late, and White maturity test at each location. These samples were analyzed by the Kentucky Grain Quality Laboratory at Lexington using NIRS. The NIRS analysis, which provided evaluation of protein, starch, and oil, is presented in Table 15 for grain at 0 percent moisture.

Since grain used in feed rations contains moisture, the composition variables provided in Table 15 should possibly be used at a moisture content that is different than 0 percent. A suitable moisture level in most feed rations is 15 percent. To convert to 15 percent moisture, multiply the values in Tables 8 or 15 by 0.85. For any other moisture content, multiply the values by  $(100 - \text{percent moisture})/100$ .

The Ethanol entries were hand pollinated at the Lexington location in a separate nursery. This seed from the nursery was harvested, shelled, packaged, and sent to the IPG Lab in Champaign, Illinois, for analysis. The results of the Ethanol are reported in gallons per bushel along with protein oil and starch.

The chemical composition data in tables 7E, 7M, 7L and 7W will be omitted from the progress report at this time. We did not believe that the data was representative of the corn hybrids in these four tests. We will try to have a sample of each hybrid analyzed again and that data will be published online at a future date.

### **Ethanol Tests**

Thirty-two entries were accepted in the new Ethanol test. This test was planted at four locations with three reps per location. This test were in two-row plots. Hand pollinations on two replications were done in a separate nursery at the Lexington location. This seed was then mixed together and a 4-pound sample was sent to the IPG lab in Champaign, Illinois.

## **Acknowledgments**

The authors sincerely appreciate efforts of the Kentucky Corn Growers Association in helping upgrade equipment. A Massey Ferguson MF 8-XP combine was leased to the corn project at minimal cost by the Kentucky Corn Promotion Council of the Kentucky Corn Growers Association. This combine contributes to improved accuracy of the data. The Corn Growers Association helped buy a new single high-capacity weighing system for the Massey MF 8-XP combine. This new system will help provide more accurate data for the farming community.

The authors are grateful to Dr. Michael Montross, Wei Chen, Research Analyst, and the Kentucky Corn Growers Association for the Grain Quality Laboratory, which processed more than 1,000 grain samples. The authors are grateful to the following farmer-cooperators, who not only provided land for testing but helped with the tests throughout the growing season: Lynn Denton and family of LaCenter, Johnny Dawson and family of Russellville, Jeff McGehee and family of Brandenburg, and Tim Thomas and family of Waverly.

The authors acknowledge the statistical and programming support of Dr. Paul L. Cornelius and Danny Walls of the Plant and Soil Sciences Department and give special thanks to Ted Walker and the entire crew of the College of Ag Farm Shop for keeping us going year-round.

Additional acknowledgements are made to the following people who helped conduct this year's performance test:

Richard C. Green, Research Technician, Department of Agronomy, Lexington  
Andy Brice, Wes Lawrence, and Kevin Edelman, and Amanda Whittington, Student Workers, Department of Agronomy, Lexington  
Charles Toll, Farmer, Lawrenceburg  
Dr. James Herbek, Extension Specialist in Grain Crops, Research and Extension Center, Princeton  
Donnie Davis, Superintendent, and Joe Williams, Farm Manager, Research and Education Center, Princeton  
David Ditsch, Superintendent, and Wade Turner, Farm Manager, Robinson Substation, Quicksand  
Tom Miller, Extension Agent, Ballard County  
Chris Milam, Extension Agent, Logan County  
Rankin Powell, Extension Agent, Union County  
Andy Mills, Extension Agent, Meade County  
Eugene Lacefield, Research Specialist, Plant and Soil Sciences  
Roger Rhodes, Technician, Plant and Soil Sciences

**Note:** The Grain Quality Laboratory is a service provided by the University of Kentucky with funding from the Kentucky Corn Growers Association.

<sup>1</sup> **Trait:**

- BT corn borer resistance
- BTCB corn borer resistance
- BTRW corn rootworm resistance
- CB corn borer resistance
- CL Clearfield Corn (Lightning herbicide tolerance)
- CRW corn rootworm resistance
- HX Herculex (corn rootworm resistance)
- IT imidazolinone tolerance (Lightning herbicide tolerance)
- LL Liberty Link (Liberty herbicide resistance)
- RR Roundup Ready Corn (glyphosate tolerance)
- RR2 Roundup Ready Corn 2 (new event, glyphosate tolerance)
- TC TopCross corn (high oil)
- YG YieldGard (corn borer resistance)
- YGBT YieldGard (corn borer resistance)
- YGCB YieldGard Corn Borer (corn borer resistance)
- YGRW YieldGard RootWorm (corn rootworm resistance)
- TS Triple stack of traits
- VT3 Triple stack of traits

<sup>2</sup> **Test:** E = Early, M = Medium, L = Late, W = White, HO = High Oil, ETH = Ethanol

<sup>3</sup> **Color:** W = White, Y = Yellow

<sup>4</sup> **CRM:** Cumulative Relative Maturity (days)

Data provided by the seed companies.

**Key:**  
YLD = Yield  
MST = Moisture  
STD = Stand  
LDG = Lodging  
TWT = Test Weight

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

**Table 9E. Yield Summary, 2007, Early Average  
(112 Days to Maturity Or Earlier), Princeton, KY.**

**Agronomic Information**

**Cooperator**  
University of Kentucky  
Research and Education Center  
Princeton  
(location 2)

**Soil Type**  
Huntington Silt Loam

**Fertilizer (lb/acre)**  
N ..... 185  
P<sub>2</sub>O<sub>5</sub> ..... 100  
K<sub>2</sub>O ..... 50

**Herbicide**  
Bicep II, Magnum, Gramoxone, Exceed

**Insecticide**  
Force 1.5G

**Planting Dates**  
April 19, 20

**Harvest Dates**  
Sept. 19, 20

**Previous Crop**  
soybean

**Notes**  
There was very little weed problems or Southwestern borer pressure at this location. There was some compaction in areas early in the season.

**Key:**  
YLD = Yield  
MST = Moisture  
STD = Stand  
LDG = Lodging  
TWT = Test Weight

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

**Table 10E. Yield Summary, 2007, Early Average  
(112 Days to Maturity or Earlier), Waverly, KY.**

**Agronomic Information**

**Cooperator**  
Tim Thomas  
Running T Farm  
2259 State Rt. 141N  
Morganfield  
(location 3)

**Soil Type**  
Memphis Silt Loam

**Fertilizer (lb/acre)**  
N .....200  
P<sub>2</sub>O<sub>5</sub>..... 90  
K<sub>2</sub>O..... 120

**Herbicide**  
Harness, Celebrity

**Insecticide**  
Force 1.5G

**Planting Dates**  
April 30, May 1

**Harvest Dates**  
Sept. 17, 18

**Previous Crop**  
soybean

**Notes**  
There was very little weed problems or corn borer pressure. There was some bird damage in the early and medium tests.

**Key:**  
YLD = Yield  
MST = Moisture  
STD = Stand  
LDG = Lodging  
TWT = Test Weight

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

**Table 11E. Yield Summary, 2007, Early Average  
(112 Days to Maturity or Earlier), Russellville, KY.**

Agronomic Information	
<b>Cooperator</b>	
Johnny Dawson 2446 Ferguson Rd. Olmstead, KY 42265 (location 4)	
<b>Soil Type</b>	
Elk	
<b>Fertilizer (lb/acre)</b>	
N .....	191
P <sub>2</sub> O <sub>5</sub> .....	69
K <sub>2</sub> O.....	60
<b>Herbicide</b>	
Roundup, Guardsman Max	
<b>Insecticide</b>	
Force 1.5G	
<b>Planting Dates</b>	
April 6	
<b>Harvest Dates</b>	
Sept. 4, 5	
<b>Previous Crop</b>	
soybean	
<b>Notes</b>	
There was <10% Southwestern corn borer damage and excellent weed control, but significant yield reduction due to drought conditions.

**Key:**  
YLD = Yield  
MST = Moisture  
STD = Stand  
LDG = Lodging  
TWT = Test Weight

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

**Table 12E. Yield Summary, 2007, Early Average  
(112 Days to Maturity Or Earlier), Brandenburg, KY.**

**Agronomic Information**

**Cooperator**  
Jeff McGehee  
1550 Longbranch Rd.  
40108  
(location 5)

**Soil Type**  
Weinbach Silt Loam

**Fertilizer (lb/acre)**  
N ..... 175  
P<sub>2</sub>O<sub>5</sub> ..... 80  
K<sub>2</sub>O ..... 80

**Herbicide**  
Roundup, Atrazine, Princep

**Insecticide**  
Warrior, Force 1.5G

**Planting Dates**  
May 8

**Harvest Dates**  
Sept. 24, 25

**Previous Crop**  
soybean

**Notes**  
There was no damage due to Southwestern corn borer and excellent weed control. There was significant yield reduction to drought conditions.

**Key:**  
YLD = Yield  
MST = Moisture  
STD = Stand  
LDG = Lodging  
TWT = Test Weight

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

**Table 13E. Yield Summary, 2007, Early Average  
(112 Days to Maturity or Earlier), Lexington, KY.**

**Agronomic Information**

**Cooperator**  
K.A.E.S. Springfield Farm, Lexington  
(location 6)

**Soil Type**  
Maury Silt Clay Loam

**Fertilizer (lb/acre)**  
N .....200  
P<sub>2</sub>O<sub>5</sub> .....0  
K<sub>2</sub>O .....100

**Herbicide**  
Bicep II, Magnum, Callisto

**Insecticide**  
Force 1.5G

**Planting Dates**  
May 7

**Harvest Dates**  
Sept. 28, Oct. 1, 2

**Previous Crop**  
soybean

**Notes**  
There was no corn borer damage at this location but some problems due to wild cucumber.

**Key:**  
YLD = Yield  
MST = Moisture  
STD = Stand  
LDG = Lodging  
TWT = Test Weight

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

**Table 14E. Yield Summary, 2007, Early Average  
(112 Days to Maturity Or Earlier), Quicksand, KY.**

**Agronomic Information**

**Cooperator**  
Robinson Forest Station, Quicksand  
(location 7)

**Soil Type**  
Philo Silt Loam

**Fertilizer (lb/acre)**  
N ..... 160  
P<sub>2</sub>O<sub>5</sub> ..... 0  
K<sub>2</sub>O ..... 0

**Herbicide**  
Bicep II, Roundup, Callisto

**Insecticide**  
Force 1.5G

**Planting Dates**  
May 10

**Harvest Dates**  
Oct. 8, 9

**Previous Crop**  
wheat

**Notes**  
This location had no damage due to South-western Corn borer. There was significant Johnsongrass in some plots. The White test data was not used due to high variability from weed problems.

\* In any column, a hybrid mean that is followed by an asterisk does not differ significantly (less than or equal to one LSD) from the highest yielding hybrid in that column.

\*\* Ethanol Yield is reported as gallons of anhydrous ethanol per standard bushel of corn (56 lbs. at 15.5% moisture).

\*\*\* Chemical Composition data from hand pollinated samples at Lexington Location.

Note: Protein, Oil and Starch reported on DB (dry basis).
